# CHC2010 - BAGS in Google Earth

Schwehr, Armstrong, Brennan, Fischman, Sellars, Smith

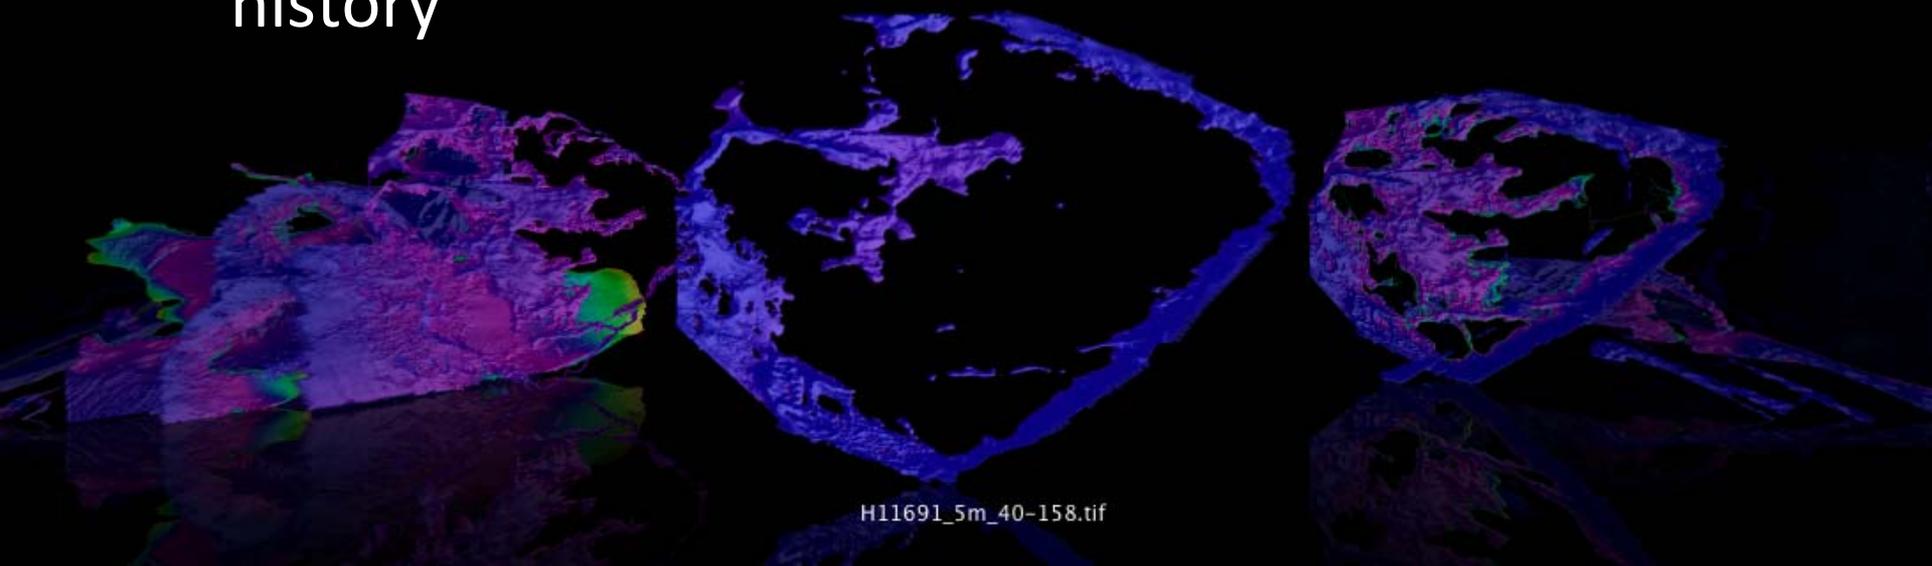

# The last mile / shoulders of many

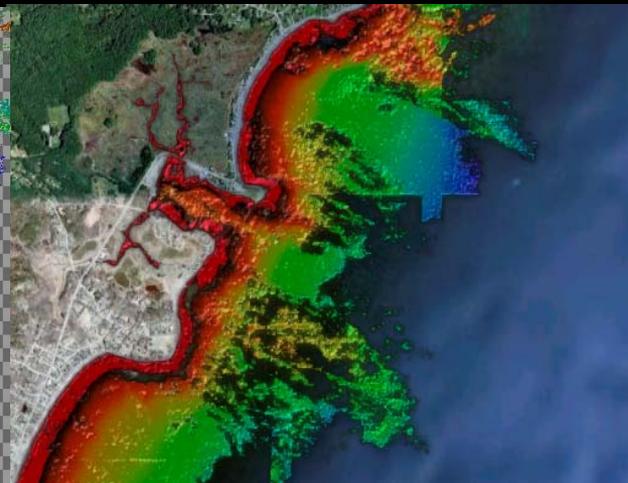

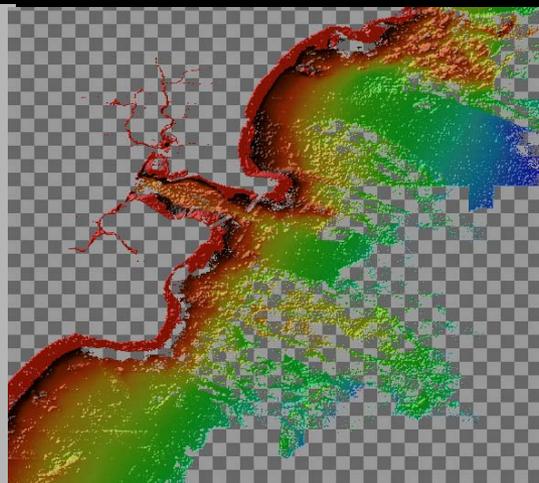

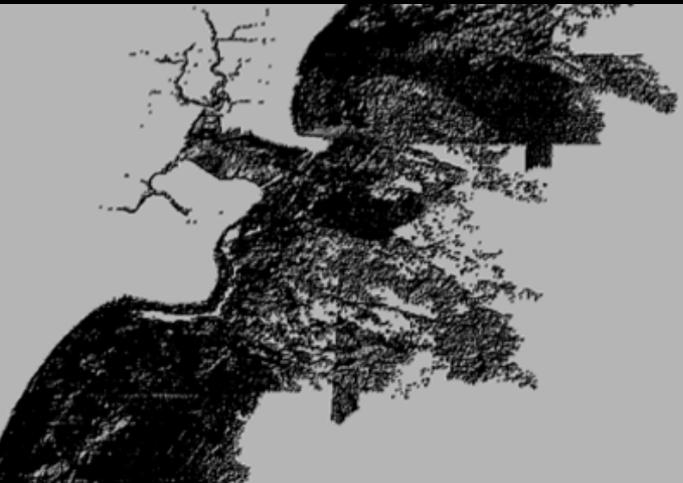

# What is a BAG?

- <http://www.opennavsurf.org/>
- An “HDF5” file containing
  - Bathymetry
  - Metadata
  - Additional layers e.g. uncertainty & processing history

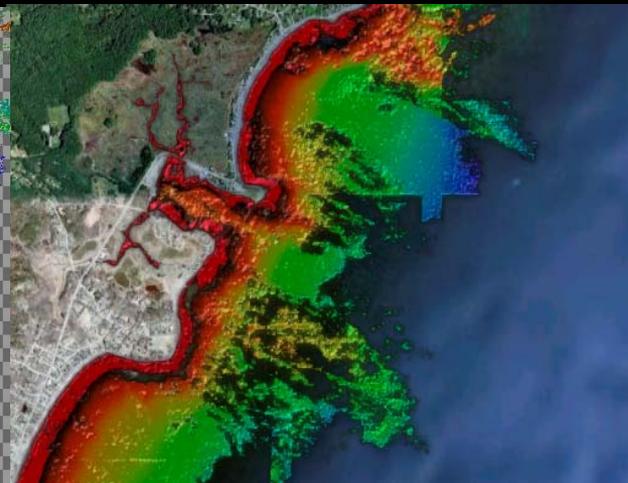

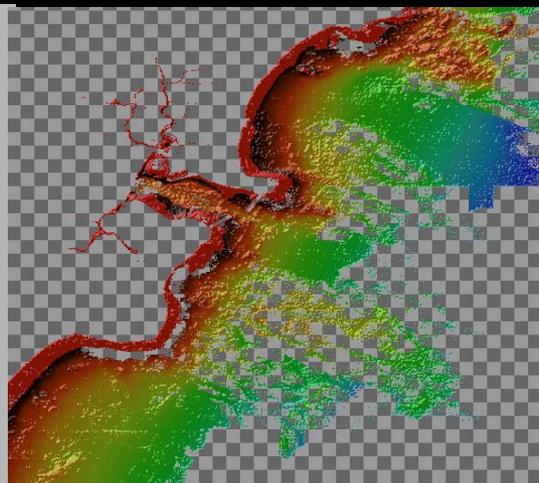

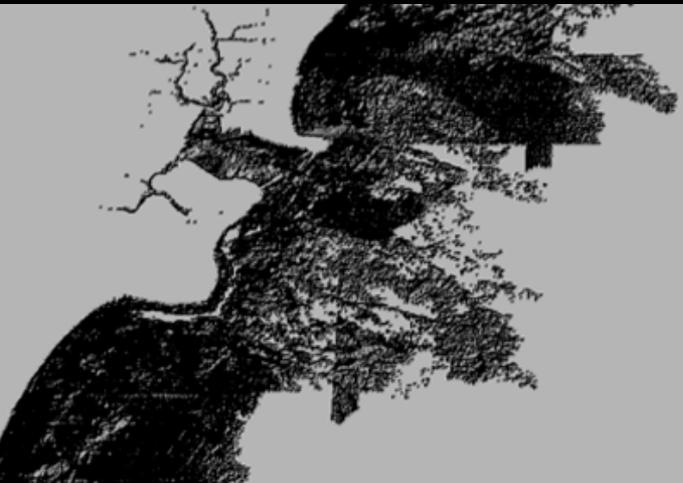

# Goals

- Document pathways from BAG to Google Earth
- How well is the community doing with producing and consuming BAGs?
- Provide a place to review the bathymetry and metadata

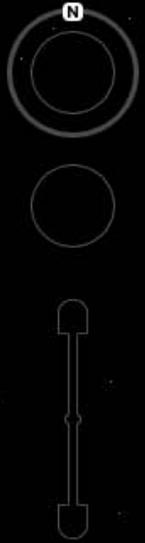

# Goals

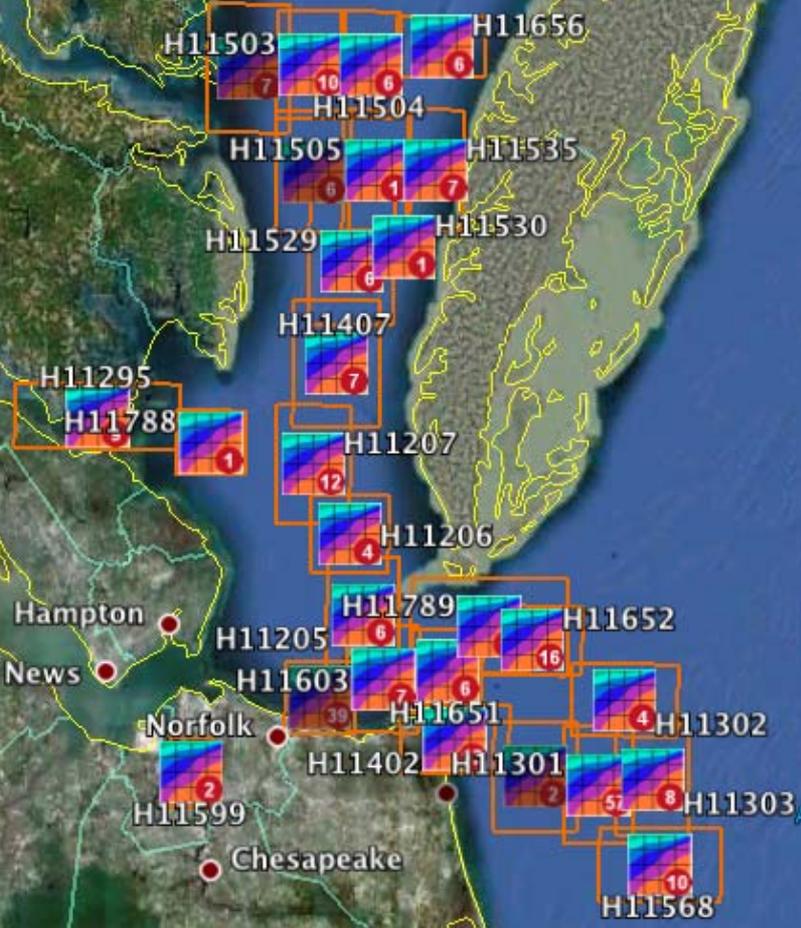

- Document pathways from BAG to Google Earth
- How well is the community doing with producing and consuming BAGs?
- Provide a place to review the bathymetry and metadata
- Increase the reuse of bathymetry products -> discoverability

# File naming conventions

Managing many thousands of files

# File naming conventions

**inst** = (1 alpha character) MER science instrument identifier.

Valid values for MER camera instruments:

"P" - Pancam

"R" - Rear Hazcam

"N" - Navcam

"M" - Microscopic Imager

"F" - Front Hazcam

"E" - Descam

Valid values for MER instruments not described in this SIS:

"A" - APXS

"T" - Mini-TES

"B" - Mössbauer

"D" - RAT ("D" for Drill)

**sc1k** = (9 integers) Starting Spacecraft Clock time.

**prod** = (3 alpha characters) Product Type identifier of input data. Product types are differentiated as having camera-induced distortion removed ("linearized") or not removed (nominal), and, as being Thumbnail-sized or not. Four special flag characters follow:

- Beginning "E" – Type of EDR, which are raw with no camera model "linearization" or radiometric correction. If no beginning "E", then it is an RDR.
- Ending "T" – EDR or RDR that is Thumbnail -sized.
- Ending "L" – If no beginning "E", denotes an RDR that is "Linearized", except for Thumbnail sized RDRs.
- Ending "N" – If no beginning "E", denotes an RDR that is ThumbNail-sized and "LiNearized".

Valid values for MER camera instrument input data products:

Data Product	Non-linearized (NOMINAL)	Linearized
--------------	-----------------------------	------------

# What would we like to encode?

- Survey Number
- Region P, A, G, etc., O (Pacific, Atlantic, Gulf of Mexico, Other)
- SUREND – S57 end of survey pings date – Year
- Instrument/Sensor type(s) used to grid
- Grid cell size (already in the name)
- Depth range (broad categories)

# File naming conventions

## Sensor Type

- **S** = **S**ingle beam sonar
- **M** = **M**ultibeam
- **T** = **T**opo lidar
- **L** = bathy **L**idar
- **G** = predicted from **G**ravity
- **C** = lead line or similar from a **C**able/**C**hain
- **R** = **R**adar, e.g. SRTM

# How and when to use the naming convention?

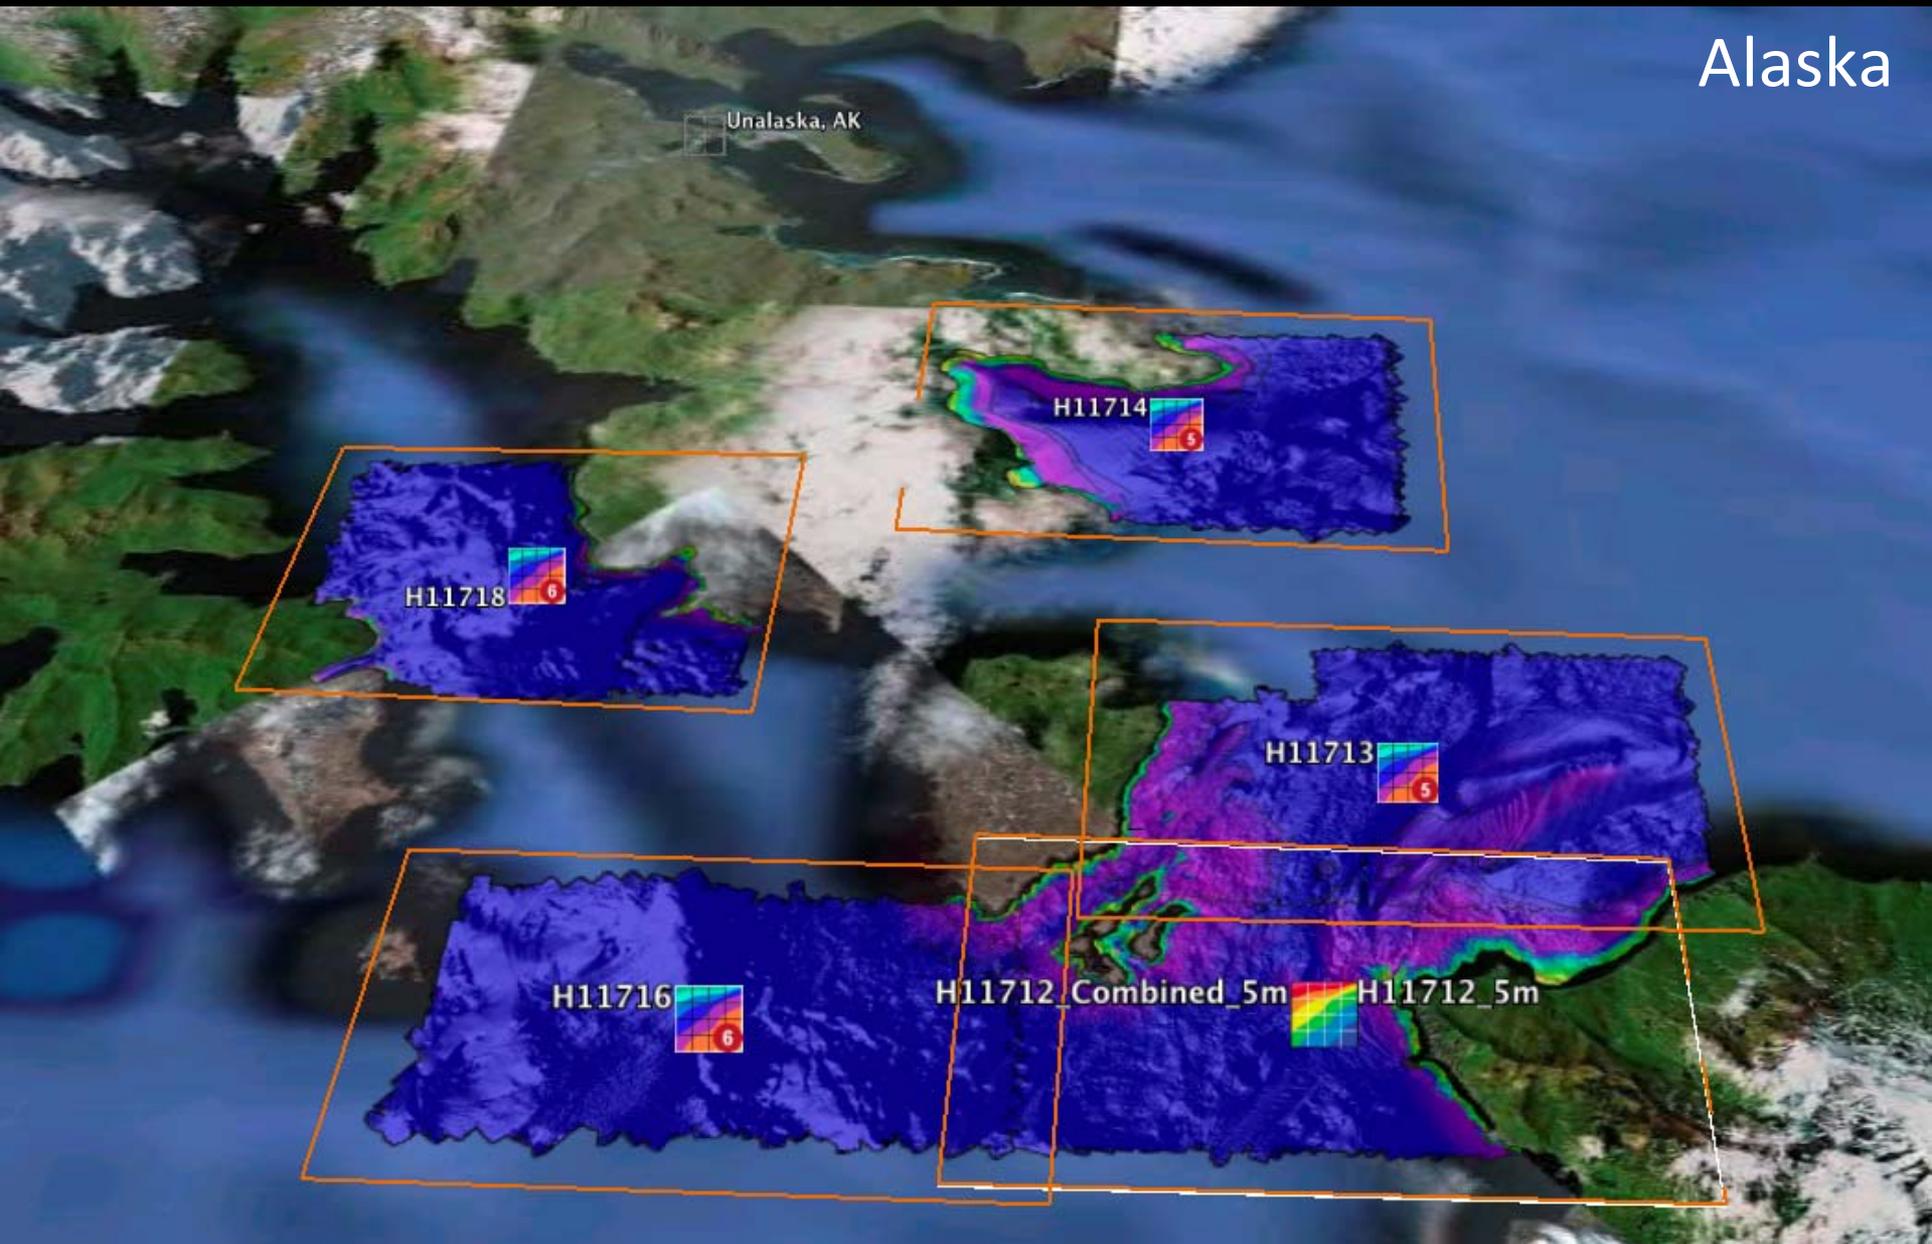

- Must be automatically generated from the metadata inside the BAG
- Must have tools that expand out the name
- Must not lose the embedded metadata!
- Primarily for the NGDC archive website
- *Checksums*, not filenames, should be used to compare if files are the same

# Where to next?

- Improve and test the metadata
- Make sure all of our tools can read BAGs
- Add stddev, backscatter and sidescan?
- Deploy a Google Earth visualization to the NGDC web site
- Work on a file naming convention

# Fantastic data for other uses

Alaska
